

COMPANY HISTORY

50 Years of Innovation

Founded in 1969, Bolger & O'Hearn has been developing and selling uniquely efficient and consistently high-quality chemicals for over 50 years.

Since our traditional beginnings in the textile industry, we have expanded into manufacturing many unique products for a wide range of industries including paper and nonwovens. Today, our diverse and comprehensive product line has over 2,500 products and is sold and distributed globally.

Bolger & O'Hearn is located in Fall River, Massachusetts, USA, and has strategically-located distribution centers in Taiwan, Central America, North Carolina, USA, and here in Massachusetts, USA.

The company is privately owned and dedicated to supporting our local and regional communities. As just one demonstration of this commitment, Bolger & O'Hearn installed a massive solar farm on our property in 2016, which now generates nearly half of our power.

We are also a leader in the development of sustainable replacements for standard industry chemistries. In addition, Bolger & O'Hearn is continuously taking steps to improve the sustainability components of our own manufacturing processes. This includes certification as a bluesign® system partner and following the globally-approved bluesign® environmental management system.
